

Transforming the network of a leading telecommunications operator to make content available in the 2022 World Cup

TOPIC

Telecommunications
Operator

BUSINESS BACKGROUND

Our customer is an international telecommunications operator, a leader in fixed, mobile, broadband and business services, tailored to the needs of customers and businesses in all its markets in the Middle East, North Africa and South East Asia.

This company provides service to one of the largest technology companies in software, internet products and search engines, with the great sporting event approaching in Qatar, they realized that they needed to have a network powerful enough to support end users having of their products and platforms online.

What needed to be resolved?

- Due to the great sporting event that will take place in Qatar, they needed to strengthen and enhance their network so that their client could make their services available by offering a correct user experience.

WHY?

To meet the demand of users using the applications at the same time allowing them to upload and download content, search for places and services, streaming of matches, among other things that their client provides.

The delivery of these services must be fast and effective.

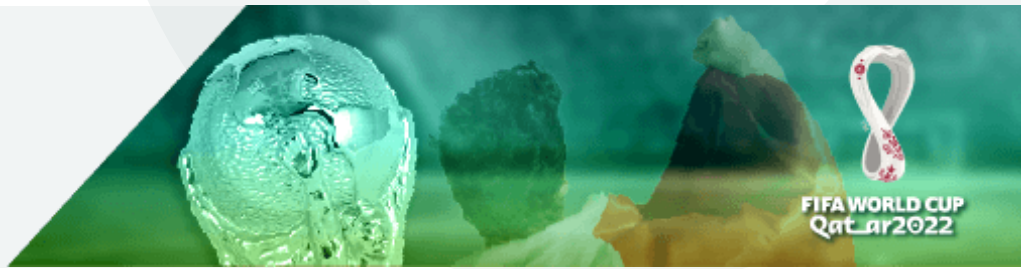

What were the main limitations?

- Our customer needed a rapid deployment of high speed 3.6T link to meet demands.
- With World Cup 2022 further demand was forecast for data and therefore increased capacity was required.

SOLUTION

Infinera Network Solutions

How did Beyond Technology help?

- The project deployment was managed with a promise of record time, we implemented an infinera solution to make a great support network available to end user.

What was the overall experience of the Beyond Technology team?

- All parties involved did an excellent job to make it happen. Complex negotiations were carried out successfully.
- The efforts of the regional and global teams achieved an excellent level of relationship with customers.

What were the results?

- A record implementation time was achieved, from the time of order to start-up. Successful implementation of 3.6T in just a couple of weeks.
- Now our customer will be able to offer an optimal service to its customer.

How was the company transformed?

We implemented a network solution that allowed the telecommunications operator to offer an optimal service to its client, who has one of the most important video streaming platforms where content will surely be shown to millions of people who will be watching the Qatar World Cup 2022, the greatest achievement has been to make the content available to satisfy the demand of the end user.
